Dear Hiring Manager,

I'm excited to be applying for the Analyst position at Quantanite. As someone with a lifetime love of mathematics, statistics and discovering useful information from the real-life instances. To describe that, a story of my childhood is as followed.

When I was a school student, used to play cricket under a local club, used to provide “best performer of the month” award with just considering any special performance as there wasn't any recorded evidence to compare the performers. However, since my childhood, I always had a fascination to play with numbers what made me up to come up with an idea of gathering statistical data of each individual for around one month and that allowed me to apply a simple formula of Statistics called ‘mean’ to find the average performance of a single participant by dividing their total score by their total number of appearances. Comparing the results, I managed to find the best performer of the month that granted me to receive great appreciation for an innovative solution.

In the recent past, I thrive on digging into complex data sets and eagerly waiting to produce insightful, data-driven strategic recommendations. I'm eager to turn my talent for analyzing big data into actionable growth strategies for Quantanite.

With having an undergraduate degree in Computer Science and Engineering, I am fluent in a wide variety of software and data management systems ranging from traditional options like Excel and MySQL to structured programming language C. University level, I was involved in organizing and carrying out programming contest, seminars and workshops for fresher, school and college student. Currently, I am working in a volunteer organization that helps me to know the key responsibilities and encourages me to develop self-esteem, self-confidence, social and communicational skills, exploring opportunities and helping the community through engagement. Furthermore, my positive attitude towards task completion, passion for the chosen area, inquiring mind, ability to persevere and work well in groups will bring significant value to this company and the colleague as well.

Thank you for your time and consideration. I'm looking forward to learning more details about the Analyst position and about Quantanite. I'm thrilled at the opportunity to use my expertise and experience to identify clues, summarizing the features, types, data and information of the contents to help Quantanite achieve its strategic and operational goals.

Sincerely,

Md Jafor Ali
